Career Objective

To obtain an entry-level software development opportunity where I can apply my knowledge of Python, HTML, CSS, and JavaScript, develop practical skills in web development, and continue learning Full Stack Java development while contributing to real-world projects and growing as a software engineer. Seeking entry-level roles in web development.

Skills

- **Programming Languages:** Java, basic knowledge in Python
- **Frontend:** HTML, CSS, JavaScript
- **Frameworks:** React
- **Database:** SQL
- **Tools & Platforms:** Eclipse, VS Code, Anaconda
- **AI Tools:** ChatGPT, Claude

Projects

Chess Game *Live Demo – Netlify*

- Built a simple chess game using JavaScript, HTML, and CSS through vibe coding, applying and strengthening frontend development knowledge.
- Deployed the project live on the Netlify platform, gaining hands-on experience with web deployment.
- Repository: github.com/vikasikify113

Algoverse – Gamified DSA Learning Platform *Present – Ongoing*

- **Tech Stack:** React, Vite, Node.js, Express.js, SQL, Judge0 CE, SVG (UI assets)
- Learning data structures and algorithms through a gamified platform, making DSA problem-solving engaging and enjoyable.
- Architected and built a dynamic grading pipeline supporting complex data types (matrices, string arrays, 3D matrices) across multiple languages using a custom driver-generation system.
- Identified and fixed a systemic data-integrity bug affecting 189+ problems by writing an auditor script and runtime shape validator, then deployed the fix via an auto-generated SQL migration with zero data loss.
- Designed and implemented a gamification system (collectible "stone" items, forge/crafting cost mechanic, consumable hint-reveal effects) to increase user retention.
- Authored structured SQL migrations to scale the problem bank (50+ new problems) while maintaining strict schema conventions across difficulty tiers.

AI-Based Disease Detection (CNN Model) *Live Demo – College Codeathon*

- Concept: an AI-based crop disease detection system with image input via mobile or drone, smart analysis of leaf patterns, automatic treatment suggestions, and real-time results with an accuracy score.
- Planned implementation approach: train a CNN model using crop disease datasets (e.g., PlantVillage), integrate with a mobile/web application, use OpenCV for image preprocessing, deploy using TensorFlow/Keras, and connect to a database for treatment recommendations.
- Built and deployed a website for the project as part of the codeathon; did not win, but gained practical exposure to smart agriculture concepts.
- Website: leaf-teller-ai.lovable.app
- Repository: github.com/vikasikify113/leaf-teller-ai

Education

BE, Computer Science and Engineering *2024 – 2028*
Sapthagiri NPS University, Bengaluru | **CGPA: 8.11** | Currently in 3rd Year (5th Semester)

Pre-University (PUC)
MES ACS PU College, Bengaluru | 84.12%

SSLC
Jindal Public School, Bengaluru | 92.45%

Achievements

- Participated in the **University-Level 7-Hour Innovation Challenge – Ideathon 2026**, organized by Innovedge, Department of CSE, Sapthagiri NPS University.
- Event held on 27 March 2026 as part of team "Code Titans".
- Explored the concept of EdTech and its implementation in colleges and universities.
- Participated in **Codeathon 2026**, organized by the CSE-AI&DS Tech Club (Code Crusaders) in association with IEEE, Sapthagiri NPS University.
- Event held on 23 April 2026; presented the "AI-Based Disease Detection (CNN Model)" project for smart agriculture.
- Did not win, but gained valuable learning experience in the domain.

Certifications

- **Introduction to Cybersecurity** – Cisco Networking Academy (Completed 19 May 2026)
- **Introduction to Modern AI** – Cisco Networking Academy (Completed 01 Jan 2026)
- **Data Analysis** – Infosys Springboard (Completed 24 March 2026)
- **Exploring Computers** – Infosys Springboard (Completed 21 June 2025)
